Proposed Amendment to Claims:

- 1. (currently amended) An anti-microbial composition consisting essentially of:
- (i) at least one first anti-microbial agent, wherein at least one of the anti-microbial agents has having a high surface tension of from 20 to 35 mN/m, and selected from the group consisting of (a) a quarternary ammonium compound having the general formula R¹R²R³R⁴N⁺X⁻, in which one or two of the R groups are alkyl substituted by aryl or interrupted by aryl or a heteroatom and the other R groups are the same or different and are C₁ to C₄ alkyl groups, (b) a dialkyldimethylammonium compound wherein the two non-methyl alkyl groups are selected from medium and long chain alkyl groups comprising 8 or more carbon atoms, and (c) a benzalknoium halide or an aryl ring substituted benzalkonium halide,
- (ii) at least one compound having a low surface tension of from 8 to 14 mN/m, and selected from the group consisting of silanes, soya lecithins, polydimethylsiloxanes, polydimethylhydroxysiloxanes, and mixtures thereof,
 - (iii) optionally, at least one additional anti-microbial agent and
- (iv) at least one polar solvent, wherein in use the anti-microbial composition acts substantially to reduce or control the formation of microbial colonies on or at a surface to which the composition is applied.
- 106. (currently amended) An anti-microbial composition containing as a solvent a polar solvent which is water, at least one alcohol, at least one hydroxyl ester, at least one glycol ester, at least one polyol, at least one ketone or a mixture thereof, and comprising:
 - (i) at least one first anti-microbial agent having a high surface tension of from 20 to 35 mN/m and selected from the group consisting of (a) a quarternary ammonium compound having the general formula $R^1R^2R^3R^4N^+X^-$, in which one or two of the R groups are alkyl substituted by aryl or interrupted by aryl or a heteroatom and the other R groups are the same or different and are C_1 to C_4 alkyl groups. (b) a

dialkyldimethylammonium compound wherein the two non-methyl alkyl groups are selected from medium and long chain alkyl groups comprising 8 or more carbon atoms, and (c) a benzalkonium halide or an aryl ring substituted benzalkonium halide; and

(ii) at least one compound having a low surface tension of from 8 to 14 mN/m and selected from the group consisting of silanes, soya lecithins, polydimethylsiloxanes, polydimethylhydroxysiloxanes, and mixtures thereof, wherein in use the anti-microbial composition acts substantially to reduce or control the formation of microbial colonies on or at a surface to which the composition is applied.
